PRD & ANC Series Non-Cycling Refrigerated Air Dryers (10 - 1200 scfm)

ENGINEERING YOUR SUCCESS.

PRD & ANC Series Non-Cycling Refrigerated Air Dryers

The importance of compressed air as a provider of energy for modern industrial processes is widely known. What is often overlooked however is the need to provide quality treatment for this air.

In fact, the air entering the system contains moisture which, when cooled, will turn into liquid water, causing extensive damage not only to the compressed air network, but also to the finished product.

These costly contamination problems can be avoided by installing a PRD or ANC Series non-cycling refrigerated dryer (ranging from 10 - 1200 scfm) package complete with Parker Airtek high efficiency filtration.

Parker Airtek's revolutionary 3-in-1 heat exchanger (PRD10 - PRD175) features a 3-in-1 aluminum design with integral air connections. All models include an air-to-air freecooler, while the unique "slowflow" demister ensures perfect dewpoints whatever the operating conditions. Our 4-in-1 heat exchanger (ANC200 and up) offers minimal pressure drops and class leading performance, and significantly increases the efficiency of the whole compressed air treatment process.

Compressed air purification equipment must deliver uncompromising performance and reliability while providing the right balance of air quality with the lowest cost of operation. Many manufacturers offer products for the filtration and purification of contaminated compressed air, which are often selected only upon their initial purchase cost, with little or no regard for the air quality they provide, the cost of operation throughout their life or their environmental impact. When purchasing purification equipment, delivered air quality, the overall cost of ownership and the equipment's environmental impact must always be considered.

Benefits of Models PRD10 - PRD175

- "Plug and Play" design for easy installation
- Robust timed solenoid drain equals improved reliability (PRD15 - PRD175)
- Unique 3-in-1 heat exchanger
- Oversized demister separator resulting in excellent liquid removal over all operating conditions
- Oversized condenser to operate in ambients to 122°F (50°C)

- Fan cycling ensures stable operation
- All models incorporate a dewpoint indicator
- Extremely compact footprint
- Low pressure differential across dryer (1.45 psi average)
- ETL listed complete unit
- Dryers manufactured in facility certified to ISO9001 and ISO14001

Benefits of Models ANC200 - ANC1200

- Optimum dewpoint levels for highest system performance
- Unique 4-in-1 heat exchanger
- High reliability, easy to use and maintain
- Environmentally friendly
- Extremely low pressure drop design
- Easy to use, highly reliable control panel
- ETL listed

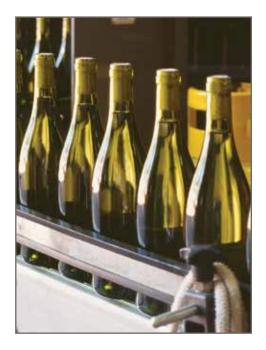

- Crankcase heater prevents refrigerant migration into compressor oil which provides compressor lubrication integrity, both prior to start-up and during the "off" cycle
- Oversized condenser to operate in ambient to 115°F (45°C) with pre-filter
- Dryers manufactured in facility certified to ISO9001
- High efficiency Parker Airtek JD Series Pre-Filter standard on all models

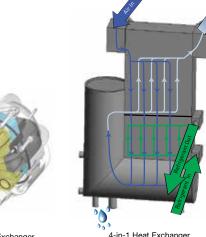

www.parker.com/faf

Benefits

PRD and ANC Series are designed to significantly reduce the operational costs of the compressor by minimizing pressure loss.

(ANC200 - ANC1200)

3-in-1 Heat Exchanger (PRD10 - PRD175)

Reduced indirect costs

Electricity required by the compressor to compensate for pressure drops in the air dryer accounts for around 25% of its total cost over 5 years. Parker Airtek's ANC Series offers average pressure drops which are about one half those of conventional systems.

Lowest Differential Pressure

Parker Airtek refrigerated dryers have an average of 2.0 psid versus the industry average of 5.0 psid.

Example:500 scfm dryer operating, 8760 hours per year

Cost of Power	Savings Realized
\$0.05 per KW =	\$546 per year
\$0.10 per KW =	\$1091 per year
\$0.15 per KW =	\$1638 per year

Reduced CO₂ Emissions

Many countries worldwide are looking closely at their manufacturing industries in an effort to reduce the amount of harmful greenhouse gases released into the atmosphere. The use of electricity has a direct impact on the generation and release of CO2. By significantly reducing the energy consumption of its products, Parker Airtek can help you reduce your carbon footprint and protect the environment.

Environmentally Friendly

Montreal Protocol compliant R134a (PRD Series) & R404a (ANC Series) refrigerants allow for zero ozone depletion, low global warming potential and low refrigerant charge.

Heat Exchanger provides less than 2 psi pressure drop

The heat exchanger features an extremely robust, all-in-one aluminum design, with no interconnecting tubing. The flow path of the heat exchanger has been designed in order to optimize its performances. In particular, large volumes allow low air velocity through the heat exchanger section, resulting in high exchange efficiency and low pressure drops. Pressure drops are further improved thanks to the absence of interconnecting pipes through the different sections of the heat exchanger and to a straight forward path of the compressed air flow with smooth and minimum changes of flow directions.

Airtek filtration, add to your savings

Any restriction to airflow within a filter housing and element will reduce the system pressure. To generate compressed air, large amounts of electrical energy are consumed, therefore any pressure lost within the system can be directly converted into a cost for wasted energy. The higher the pressure loss, the higher the energy costs. In order to build upon the low pressure drop of the PRD and ANC Series, not just any compressed air filter will do.

Sources of Contamination Compressed air and gas lines typically contain water, oil and particulate contamination

The contaminants of greatest concern in precision compressed air systems are water, oil and solids.

Water vapor is present in all compressed air and it becomes greatly concentrated by the compression process. While air dryer systems can be used effectively to remove water from compressed air, they will not remove the second major liquid contaminant - oil.

Most oil comes from compressor lubrication carry-over, but even the air produced by oil-free compressors has hydrocarbon contamination brought into the system through the intake.

The third contaminant is solid matter including dirt, rust, and scale. Solid particulates, combined with aerosols of water and oil, can clog and shorten the life of air system components and can foul processes.

Airtek High Efficiency Filtration

- Maximum oil carryover 0.012 PPM w/w -ISO12500-1 tested at 40 PPM inlet challenge.
- Elements are self sealing (JC models)
- Elements utilize low turbulence flow design (JD models)
- Epoxy saturated borosilicate glass nanofiber media with outer synthetic fabric dryer layer allowing swift removal of coalesced liquids
- Includes differential pressure indicator and manual drain providing visual assurance of performance (JC models)
- Differential pressure gauge and auto drain (JD models)
- Durable aluminum chromated heads and bowls with powder coated finish
- Large sump capacity to handle condensate
- Simple installation and easy maintenance

JC Series

ID Series

International Standard ISO8573-1 has become the industry standard method for specifying compressed air cleanliness.

				Solid Particulate		Water	Oil

Notes:

1. Standard equipment includes: -Models PRD10 - PRD175 have electromechanical control -6' power cord (115V models) on Models PRD10 - PRD125 only

-on/off switch

-R134a environmentally friendly refrigerant

-power on light

-built-in demister for high efficient removal of condensed liquid

-removable cabinet for easy access to internal components

-moisture dewpoint indicator -automatic condensate drain on Model PRD10

-timed solenoid condensate drain on Models PRD15 - PRD175

2. For reliable operation and to meet warranty conditions, a pre-filter must be installed

Correction Factors for Models ANC200 - ANC1200

To obtain dryer capacity at new conditions, multiply nominal capacity x C1 x C2 x C3.

Notes:

1. Models ANC200 - ANC1200 include the following equipment as standard:

-on/off switch

-power light

-high pressure alarm light -low pressure alarm light

-R404a environmentally friendly refrigerant

-built-in demister for high efficient removal of condensed liquid -removable cabinet for easy access to internal components

-moisture dewpoint indicator

-automatic condensate drain

2. For reliable operation and to meet warranty conditions, a pre-filter must be installed, included standard with the ANC dryer.

Aftermarket

Compressed air equipment users demand much more than the supply of high quality products in order to maintain a competitive edge.

Modern production technology is increasingly demanding the provision of a higher purity and more reliable compressed air supply. Products and solutions that are manufactured by Parker Airtek are designed to provide air quality that meets with and often exceeds international standards.

As well as the requirement for air purity and reliability, there are additional factors to consider when choosing the right service provider for your compressed air and gas purification system. For example, knowledge of the many regulations regarding the management of industrial waste, energy efficiency improvement programs and consideration of any environmental impact. It is anticipated that future legislations will demand further in-depth technical and knowledge-based support from service providers. Our commitment to industry does not stop with the supply of high quality products. We are also committed to ensuring that our equipment provides high performance by providing a trouble-free service from a bespoke maintenance and verification package – all tailored to your own specific requirements.

We offer a wide range of valuable services that will impact positively on your drive towards improved production efficiency and product quality with reduced production rejections and operational costs.

From initial selection to installation, commissioning, preventative maintenance and specialized services, Parker Airtek is redefining customer service.
